Pre-release 0.13.0

Date of Release: December 27, 2023

Details

- Fixed #326 - Failing IT's based on Maven 3.8.7
- Fixed #329 - Upgrade to smpp 5.3.14
- Fixed #409 - Remove superfluous debugging outputs
- Fixed #410 - Document build requirement
- Fixed #417 - Maven 4.0.0 - Failing IT - maven-resources-plugin not defined

Breaking Changes

- Fixed #277 - Remove Deprecated Code. Take a look into the release notes of Version 0.12.0.
- If you have used `@MavenDebug` annotation you have to replace that usage with `@MavenVerbose`. You will get `deprecated warnings` during the compilation.
- Fixed #379 - Deprecated `@MavenDebug`; Replace the usage with `@MavenVerbose`. `@MavenDebug` will be removed with release 0.14.0.
- Fixed #421 - Deprecated the `MavenVersion#UNKNOWN`. If you have used it somewhere you will get a deprecation WARNING during compilation. That should be replaced with `MavenVersion#ANY`. (Usually you shouldn't have used that anyway). `MavenVersion#UNKNOWN` will be removed with release 0.14.0. Also all Maven Version for `M3_0_5` up to `M3_5_4` have been marked deprecated to indicate that those versions are very old and shouldn't be used anymore; Not even in tests (You should upgrade your Maven version)
- Fixed #359 - ITF class level annotations misbehave
  - if you have used `@MavenProfile` annotation on class level with profiles and relied on the behaviour that on a method or a nested class a definition of another `@MavenProfile` replaced all the original profiles during the execution. That behaviour has been changed. Please refer to the users guide about `@MavenProfile` annotation and it particular behaviour. The following example shows the behaviour in release 0.12.0:

```
@MavenProfile({"profile-1", "profile-2", "profile-3"})
class ProfileOnClassIT {

  @MavenTest
  void profile_1_2_3(MavenExecutionResult result) {
     ...
  }

  @MavenTest
  @MavenProfile("profile-1")
  void profile_1(MavenExecutionResult result) {
    ...
  }
}
```

The way to achieve the same with the release 0.13.0, you have to express is like this:

```
@MavenProfile({"profile-1"})
class ProfileOnClassIT {

  @MavenTest
  @MavenProfile({"profile-2", "profile-3"})
  void profile_1_2_3(MavenExecutionResult result) {
     ...
  }

  @MavenTest
  void profile_1(MavenExecutionResult result) {
```

```
    ...
  }
}
```

Pre-release 0.12.0

Date of Release: 28. December 2022

Scope:

- Fixed #284 - pom.xml in subfolder is not found or not supported

Details

- Fixed #226 - itf-assertj dependency is missing in README
- Fixed #210 - Removed unused dependency commons-compress.
- Pull request #211 - Add @MavenTest annotation to README example
- Fixed #230 - Get rid of commons-io
- Fixed #232 - Support for custom location and reuse of a Maven project from my resources This is also related to Fixed #286.
- Fixed #260 - Test project's file attributes & links get lost when copied to test target/maven-it

Upgraded maven-filtering and maven-artifact-transfer and added explicitly maven-shared-utils to prevent using transitive dependency.

- Fixed #264 - The targetBaseDirectory in MavenProjectResult points to wrong location. Added some tests to prevent the issue.
- Fixed #278 - Enhance list of Maven versions
- Fixed #279 - Typos / Minor Code cleanups
- Fixed #282 - Add missing equals/hashCode for custom assertions.
- Fixed #285 - Add some tests.
- Fixed #286 - Support a way to avoid the requirement for resources-its directory.
- Fixed #289 - @MavenProjectLocation("subdir") Does not work on nested Class
- Fixed #290 - @MavenProjectSources is not usable within another annotation.
- Fixed #297 - Assign @SystemProperty to class / nested class and inherit on all test methods.
- {issue-??} - ?

Breaking Changes

- Fixed #276 - Replace File with Path
  - The return type of the methods `getTargetProjectDirectory()`, `getTargetBaseDirectory()` and `getTargetCacheDirectory()` of the class `MavenProjectResult` has been hanged from `File` into `Path`. That means you have to check your code. It will be obviously getting compile errors if you have used one of the above methods in your own code.
  - The method `Model readProject(File pomFile)` of the class `ProjetHelper` has been marked deprecated and will be removed with release 0.13.0. This means you have to replace the call of that method with the same which has a parameter `Model readProject(Path pomFile)`.
  - Technically the class `ArchiveAssert` extended before from `AbstractAssert<ArchiveAssert, File>` while it now extends `AbstractAssert<ArchiveAssert, Path>` instead.
- Fixed #281 - Lifting Maven minimum version for itf-maven-plugin to Maven 3.2.5+

Pre-release 0.10.0

Date of Release: May 16 , 2021

Scope:

  - Fixed #142 - Reduce visibility of classes
  - Fixed #143 - Deprecate ExecutionResult.Error
  - Fixed #145 - Remove not used dependency to testcontainers.

- Fixed #173 - Improve issue template.
- Fixed #174 - Improve the output in case of an error.
- Fixed #175 - Enhance the MavenProjectResult.
- Fixed #176 - Remove needless import on MavenProjectResult in docs.
- Fixed #186 - Typo in method name should be isSuccessful.

Enhancements

- Fixed #180 - Enable debugging of plugin while running integration tests.

Details

- Fixed #128 - Add automatic module name.

Breaking Changes

- Fixed #140 - Remove deprecated marked annotation elements and code
- Fixed #142 - Reduce visibility of classes; If you have used the following classes `ApplicationExecutor` or `DirectoryHelper` in your code they have be made invisible for users. No alternative available.
- Fixed #143 - Deprecate ExecutionResult.Error; If you have used that directly within your code you should change your code. This is being marked deprecated and will be removed with release 0.11.0.
- Fixed #175 - Enhance the MavenProjectResult. Based on the enhancements we have added `getTargetBaseDirectory()` and `getTargetCacheDirectory()`. `getTargetBaseDirectory()` is the same as `getBaseDir()` to keep compatibility in release 0.10.0. The `getBaseDir()` has been marked deprecated and will be removed with release 0.11.0.
- Fixed #163 - You have to change the configuration within your test `pom.xml` file. The configuration to filter the content of the `resources-its` directory.

```
<testResource>
  <directory>src/test/resources-its</directory>
  <filtering>true</filtering>
</testResource>
```

This is not allowed anymore. This means you have to bind the `itf-maven-plugin` with a supplemental goal in your pom file as shown in the following example:

```
<plugin>
<groupId>com.soebes.itf.jupiter.extension</groupId>
<artifactId>itf-maven-plugin</artifactId>
```

```
<version>0.10.0</version>
<executions>
  <execution>
    <id>installing</id>
    <phase>pre-integration-test</phase>
    <goals>
      <goal>install</goal>
      <goal>resources-its</goal>
    </goals>
  </execution>
</executions>
</plugin>
```

You have to add the supplemental goal `resources-its` in your configuration.

- Fixed #186 - based on a typo in the method name `isSuccesful()` of the class `MavenExecutionResult` instead of `isSuccessful()` the method `isSuccesful()` is marked deprecated and should not being used anymore and will be removed with release 0.11.0. Replace it with `isSuccessful()`.
- Fixed #177 - Move creation of target structure into beforeEach. This change could influence your integration tests. So please check your build. If you have issues please report them.

Pre-release 0.9.0

Date of Release: August 12, 2020

Scope:

- Refactoring/Code cleanups
  - Fixed #130 - Moving Conditions into separate package
  - Fixed #131 - Reduce visibility of MavenITExtension.
  - Fixed #132 - Remove StringInterpolator from public API
  - Fixed #134 - Maven test should use options = "--errors" by default
  - Fixed #135 - Split properties of @MavenTest across multiple (@Repeatable) annotations
  - Fixed #136 - Remove `debug` from MavenJupiterExtension annotation
  - Fixed #138 - Rename `MavenOptions` into `MavenCLIOptions`.

Details

- Fixed #139 - Typos in License Text

Breaking Changes

- Fixed #135 - Split properties of @MavenTest across multiple (@Repeatable) annotations
  - Deprecate the `@MavenTest` annotation elements `goals`, `activeProfiles`, `options`, `systemProperties`, `debug` with release **0.9.0**.
    - Add replacements `@MavenGoal`, `@MavenProfile`, `@MavenOption` and `@SystemProperty`.
      - This means all the annotation elements of `@MavenTest` will be removed with release **0.10.0**.
    - You have to migrate your code accordingly otherwise you will face compile errors with the upgrade to release **0.10.0**.
    - The users guide has been updated to represent only the new annotations and no usage of annotation elements.
    - Changed the users guide accordingly to the new annotations.
- Fixed #130 - Moving Conditions into separate package
  - The annotations `DisabledForMavenVersion` and `EnabledForMavenVersion` have been moved from `com.soebes.itf.jupiter.extension` into `com.soebes.itf.jupiter.extension.condition` package. The consequence is that you have to change your imports if you use them.
- Fixed #138 - Rename `MavenOptions` into `MavenCLIOptions`.
- Fixed #132 - Remove `StringInterpolator` from public API If you have used it you have to remove the usage. No replacement available.
- Fixed #136 - Remove `debug` from MavenJupiterExtension annotation If you have used to turn on debugging via the annotation `@MavenJupiterExtension` this means you need to change your tests and use the `@MavenTest(options=MavenCLIOptions.DEBUG)` to get the same behaviour. Related to Fixed #135 you have to replace it with `@MavenOption(MavenCLIOptions.DEBUG)` or you can use `@MavenDebug`.
